

Essential Learning Map

One form, four steps — one per meeting. Built across Meetings 5–8 and completed at Meeting 8.

Use the linked Solution Tree tools to do the thinking; record the results here. A completed map is the end product your team should have at the end of Meeting 8.

Team	
Course / grade	
Cycle / dates	

Step 1 · Identify the essential standard (Meeting 5)

Think with: [Using REAL to Identify Essential Standards](#) (Solution Tree).

Essential standard (full text)	
What students must know & be able to do	
Academic vocabulary	

Step 2 · Deconstruct into learning targets (Meeting 6)

Think with: [Deconstructing an Essential Standard](#) (Solution Tree). Write each target as a student-friendly “I can...” statement; mark its type — Knowledge, Reasoning, Skill, or Product.

#	Learning target — “I can...” statement	Type (K / R / S / P)
1	I can...	
2	I can...	
3	I can...	
4	I can...	

Step 3 · Define success criteria (Meeting 7)

Think with: [Gaining Shared Clarity](#), [Developing a Success Checklist](#) (Solution Tree). Choose a priority target and describe what proficient includes.

Priority learning target	
Success criteria — what proficient includes	

Step 4 · Anchor proficiency (Meeting 8)

Think with: [Proficiency Anchors think sheet](#) (EMS).

Write anchors together: each teacher drafts a proficient and a not-yet example for the priority target; compare them, name where you disagree, and record what the team agrees on. This is proficiency calibration — the real scoring calibration comes later, after students take the common assessment.

Proficient anchor — what a proficient response looks like	
Not-yet anchor — what a not-yet response looks like	
Where we disagreed / how we resolved it	

Completion check — end of Meeting 8

- ☐ Step 1 — Essential standard selected and recorded (Meeting 5)
- ☐ Step 2 — Learning targets written as “I can...” statements (Meeting 6)
- ☐ Step 3 — Success criteria written for the targets (Meeting 7)
- ☐ Step 4 — Proficiency anchored: proficient and not-yet examples agreed (Meeting 8)

When all four steps are checked, this map is your team's end product for Clarifying Essential Learning. The real scoring calibration comes later, after students take the common assessment — you'll calibrate against the proficiency you recorded here.
